Phase One – 41T3 Municipal Well Project

PROJECT BACKGROUND

The City of Laramie has an existing municipal well, 41T3, that is not currently part of the municipal water supply system and has surface access issues. Under Permit No. U.W. 207285 the intention is to relocate and re-drill this well into an appropriate easement located within 1,500 feet of the existing well within the corporate boundary of the City. The new 41T3 well is intended to be plumbed into the existing Eastside Tank water line.

Phase One will consist of identifying an appropriate place to install the well and anticipated future infrastructure, (wellhead building, chlorination unit, etc.), communicating with all appropriate regulatory agencies (WYDEQ, WYSEO, etc.) to ensure that all necessary permits and criteria are met and designing a well with specifications that meet all current standards for a municipal well and can be taken out to bid to secure a well driller under an RFP for Phase Two of this project.

The selected firm will be expected to lead the City of Laramie's efforts during this Phase One project through design, communication, planning and permitting.

PROJECT OBJECTIVES

The objective of this project is to provide a design and location for a safe and reliable public water supply well that meets all current well design and wellhead protection standards and can provide 675 gallons per minute to Zone 4 of the municipal water supply system in support of the residents of north Laramie.
